

Cooling Scarf Kits!

These are the materials Mending Bloc uses in the cooling scarf kits that we give out to people with sewing machines.

1 tablespoon of dry water beads/crystals is enough for 12 scarves (they use ¼ tsp each).

Quilting cotton fabric: 54 inches per 12 scarves

If you're using our kit instructions, it's important to use the water beads or crystals that we've tested to be sure the quantities are correct!

These are **AquaGems** or **Orbeez** brands, which have both become hard to source now, or a few different bulk options from amazon which are linked on our website: mendingbloc.carrd.co/#coolingscarves.

We've found three different non-amazon options which sort of work but don't expand as much (listed on our site), so you'll need to either use approx 50% more beads (so ½ tsp and then another approx ¼ tsp) OR cut the fabric 4" wide instead of 4.5"—extra instruction tags are included at the end of this pdf if you're making kits with these beads (see page 7). Cut **48"** of fabric for a kit for 12 scarves with these.

Or, for the water crystal type, use **Miracle-Gro brand Water Storing Crystals**—other brands may make for slimy scarves, so if you're using something else be sure to thoroughly test them first before making a batch for distribution!

So these are some kit options...

12 SCARF KIT

- » 1 TBSP water beads or crystals, in a ziplock bag with warning paper inside
- » 1½ yards (54") of fabric (approx 44" wide)
- » A half-sheet of the "COOLING SCARF" labels (12 labels) for distribution
- » 1 instruction booklet

24 SCARF KIT

- » 2 TBSP water beads/crystals, in a ziplock bag with warning paper inside
- » 3 yards (108") of fabric (approx 44" wide)
- » A full sheet of the "COOLING SCARF" labels (24 labels) for distribution
- » 1 instruction booklet

You'll need to print out:

- » 1 sheet of the instructions per kit: page 2
- » 1 sheet of the labels per 1–2 kits:
 - page 3 if using BEADS
 - page 6 if using CRYSTALS
- » 1 sheet of the warning papers (page 4) per 21 kits

Print all sheets fit-to-page.

Fold the instruction sheet in half and in half again so page 1 is on top.

If you make/distribute these, and you post about it on social media, we'd love to see! Tag us @mendingbloc on instagram!

stitches); maybe go over the line twice.
the other (so the dry beads/crystals can't slip past the

Make a Cooling Scarf

These cooling scarves are filled with magical water-absorbing orbs or crystals which keep the wearer's neck cool by slowly releasing water all day long. Once it dries out, just soak in water to refill.

polymer material, meant to fill vases) or **Miracle-Gro brand Water Storing Crystals** (do not use a different brand without testing first—they have mixed results!)

» Sewing machine with thread (just basic straight stitch is needed)

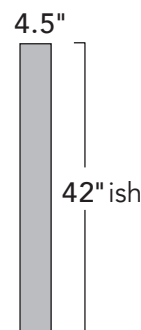

» Scissors or a rotary cutter

» A safety pin or bodkin tool

Prep the Fabric

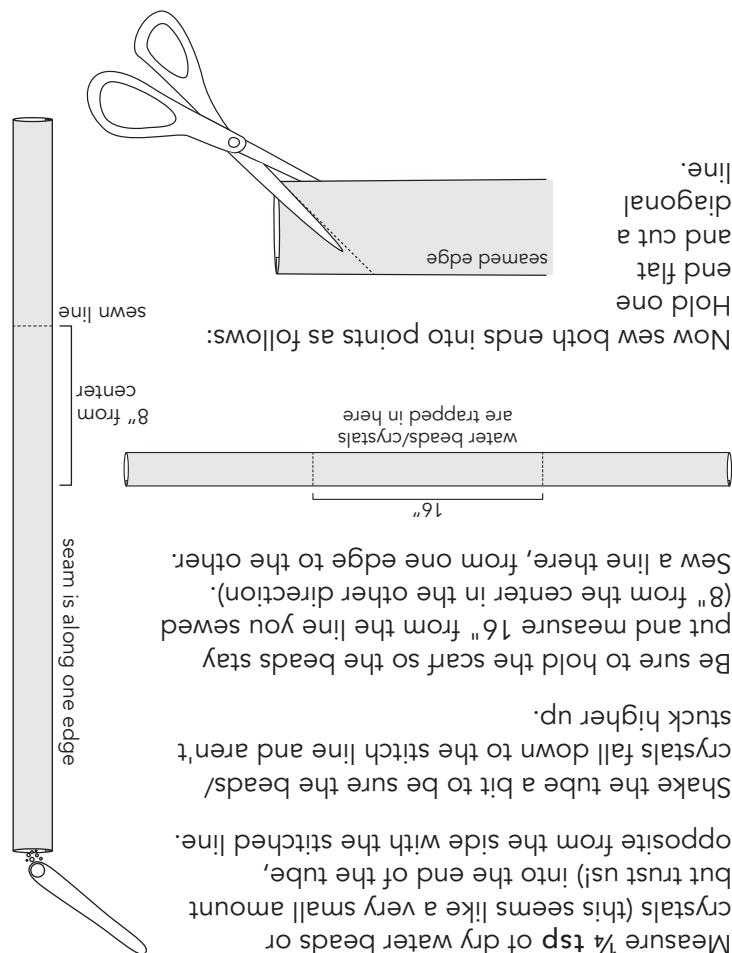

Cut into strips measuring 4.5" wide x approx 42–44" for each scarf.

Fabric from a bolt measures 42–44" across, so it'll just need to be cut into strips that are each 4.5" wide.

YOU'LL NEED

- » **Fabric:** woven quilting cotton or other woven fabric like thin denim or any reclaimed pieces you have that are not a loose weave, pre-washed/shrunk)
- » **Water Beads or Crystals:** AquaGems or Orbeez brand beads or another specific tested brand listed on our website (water-absorbing

Measure 1/4 tsp of dry water beads or crystals (this seems like a very small amount but trust us!) into the end of the tube, opposite from the side with the stitched line.
Shake the tube a bit to be sure the beads/crystals fall down to the stitch line and aren't stuck higher up.
Be sure to hold the scarf so the beads stay put and measure 16" from the line you sewed (8" from the center in the other direction).
Sew a line there, from one edge to the other.

Fold the edge inside 1/4"–1/2" and smooth into a pointed shape, then sew along the diagonal edge, very close to the edge.

Continue sewing (top stitching) up along the edge of the seamed side, to the line. Repeat for the other side.

Use the Scarf

Shake the center of the scarf to try to distribute the dry beads/crystals (so they are not all together on one side), then soak in water: for beads, 6 hours or longer (after 1–2 hours you can check distribution as the beads start to fill and shake them around to be spread more evenly); for crystals, only about 2 hours is needed.

Wear to keep cool, or distribute to others! If giving out, let people know what they are and that they can keep being soaked and reused after they dry out.

For distribution to free fridges, etc, pre-soak and then put the ready-to-wear scarves in ziplock bags (freezer bags are best) to place into fridges or hand out. Attach a piece of paper (staple or tape) saying something like

COOLING SCARF

Tie around your neck to keep cool!
Once it dries out, soak in water for 6+ hours to re-hydrate & wear again.

Print out the following page of tags if using water crystals instead of water beads.

Print out the sheet on the next page to add to kit water bead bags only if making kits with "Magic Beadz" or "Sublime Gifts" or "Water Marbles" brands of water beads.
(see mendingbloc.carrd.co/#coolingscarves for more info)

Note that a kit for 12 scarves using these beads only needs 48" of fabric.
